

PRD: VibeCheck

Authors: Gemini | Status: Draft

Overview (TL;DR)

VibeCheck is an event aggregator platform that allows users to input a city and a date range (up to 7 days) to find public events across a wide cultural spectrum. The app acts as a central hub, scraping and indexing data from major platforms (Eventbrite, Posh, etc.) and presenting them in a searchable, filterable interface with dedicated event detail pages.

Outcome

Users will experience a 3-step flow to discover and plan their outings:

- 1. **Global Search:** Input destination and timing.
- 2. **Discovery & Filtering:** A comprehensive list of events filterable by day and category.
- 3. **Deep Dive:** Dedicated event pages with full details, weather, and one-click navigation.

User Requirements - MVP (The UI Flow)

Step	Screen	User Action / Flow	MVP?
1	Search Home	User enters a City and selects a Date Range (Max 7 days).	Yes
2	Search Results	User views a master list of all events. They can Filter by specific Day or any of the 10 Categories .	Yes
3	Event Detail Page	User clicks an event to see: Name, Location, Cost, Description, Link, "Get Here" button, and Weather.	Yes

Technical Functional Requirements

Feature	Requirement	Technical Implementation

Data Aggregation	Multi-Source Scraping	System must scrape/API-fetch from Eventbrite, Posh, Ticketmaster, Luma, and Meetup based on city and date_range .
Categorization	Spectrum Tagging	Logic must categorize every event into one of the 10 defined categories (Nightlife, Family, etc.) based on metadata.
Location Services	Geocoding	Convert user-entered City string into Lat/Long coordinates to power weather and map queries.
Weather Integration	NWS API Support	Fetch specific daily forecasts from the National Weather Service using geocoded coordinates for the Event Detail page.
Navigation	Deep Linking	The "Get Here" button must generate a universal Google Maps URL using the verified event address.
Data Integrity	Event Verification	System must validate that every event has a physical address and a valid source URL before displaying.
Performance	Filtering Logic	Search page must support real-time front-end filtering by Date and Category without re-scraping.

Event Categories & Source Integration

To ensure users find things across all spectrums, **VibeCheck** aggregates events into these 10 groups:

1. **Nightlife & Parties:** R&B, Reggae, Hip Hop, and Salsa parties.
2. **Family & Kids:** Park events, playgrounds, and kid-friendly festivals.
3. **Food & Drink:** Brunch, food truck rallies, and pop-up dining.
4. **Live Music & Concerts:** Jazz sets, local bands, and ticketed performances.
5. **Arts & Culture:** Gallery openings, theater, and spoken word.

6. **Health & Wellness:** Outdoor yoga, boot camps, and wellness meetups.
7. **Community & Festivals:** Street fairs, block parties, and urban culture.
8. **Workshops & Classes:** Sip and paint, cooking classes, and DIY workshops.
9. **Professional & Networking:** Tech mixers and business seminars.
10. **Sports & Recreation:** 5K runs, pick-up games, and sports screenings.

Target Sources: Eventbrite, Posh, Ticketmaster, Luma, Meetup, and local community calendars.

UI Components

- **Search Results Page:** Includes a "Filter Bar" for toggling categories and specific dates within the 7-day range.
- **Event Detail Page:**
 - **Name & Description:** Detailed breakdown of the event.
 - **Weather Widget:** Specific NWS forecast for that event's date (requires city to lat/long conversion).
 - **"Get Here" Button:** Opens Google Maps with the event address as the destination.
 - **Original Link:** Clear CTA to view the event and purchase tickets on the source site (e.g., Posh).

Success Metrics

- **Filter Engagement:** Percentage of users who utilize the day/category filters on the search page.
- **Detail Depth:** Average time spent on the Event Detail page.
- **Navigation Rate:** Number of users clicking the "Get Here" button per session.
